Drutt Corporation delivers MMS infrastructure to Telia Mobile in Sweden

The MMS service that Telia launched today is powered by Drutt Corporation.

Drutt Corporation has delivered a solution based on Drutt MMS-C. An MMS-C handles all incoming and outgoing MMS, and is therefore essential for any MMS service. Drutt's solution will thus enable Telias customers to enjoy rich multimedia messaging communication.

Besides delivering the core MMS functionality, Drutt is also hosting and operating the solution.

The solution gives all Telia's Swedish mobile customers the possibility to send and receive MMS messages. The users that do not yet subscribe to Telia's MMS service will receive an SMS-notification of an inbound MMS-message.

Drutt's MMS Solution enable the transmission of messages containing high-resolution color pictures, sound and drawings in any combination-between mobile devices and from applications to these devices, either via a mobile phone or an email account.
